

Features

There are many situations where the ceiling is too high to mount a projection screen.

The Remaco FLY is designed to solve this problem. With a maximum travel distance of 6 meters, the FLY can lower a projection screen, such as the Remaco TEN Series or PRO-L Series motorized screen, from a high ceiling to its optimal viewing height.

The FLY features a concealed tubular motor and operates like a motorized screen.

When not in use, it retracts neatly into its sleek black casing. Control cables are managed with a built-in self-coiling drum to avoid any unsightly dangling wires.

Specifications

Model	Dimension (cm)	Weight (kg)	Max Load (kg)	Maximum Travel Distance (m)
FLY-3000	300 x 70 x 70	95	100	6
FLY-4000	400 x 70 x 70	135	160	6
FLY-5000	500 x 70 x 70	160	200	6
